ECS1000

AP.MARINE'S SOLUTION FOR VERSATILE NON-RATED APPLICATIONS

The **ECS1000** is a long proven drive system, designed for both internal and external sliding door applications. It boasts a high reliability and smooth operation, with flexible configurations. Non-rated and capable of withstanding conditions up to IPX7, this system offers exceptional durability and versatility. Safety is paramount with features such as light barriers and touch switches. The encoder-controlled mechanism ensures super accurate operations, and the system is programmable for up to five different modes, catering to diverse needs. With a long proven track record, the ECS1000 stands as the ultimate choice for advanced sliding door solutions that do not require MED certificates.

TECHNICAL DATA:

- for external and internal operations
- door weight of up to 400kg (higher weights are subject to special design)
- solid seawater resistant aluminum J-track
- convex and concave rollers with excentric stainless steel adjustment bolts
- various safety features such as light barrier, touch switches
- encoder controlled for super accurate and smooth operation
- programmable for up to 5 different modes
- long proven track record
- upgradeable up to IPX7
